Domain and Web Space Details

1. Domain Details :

Srl No	Domain Name	Availability
1	www.omkaraholidays.com	Yes
2	www.omkaraholidays.co.in	Yes
3	www.omkaraholidays.in	Yes
4	www.omkaraholidays.org	Yes

The above table shows the availability of domain name arranged in prioritized order. All the domain name for Omkara Holidays are available. So as per the requirement selected the first domain name **www.omkaraholidays.com** .

For more details about the domain relating web space, Monthly bandwidth and pricing refer the Annex(A)

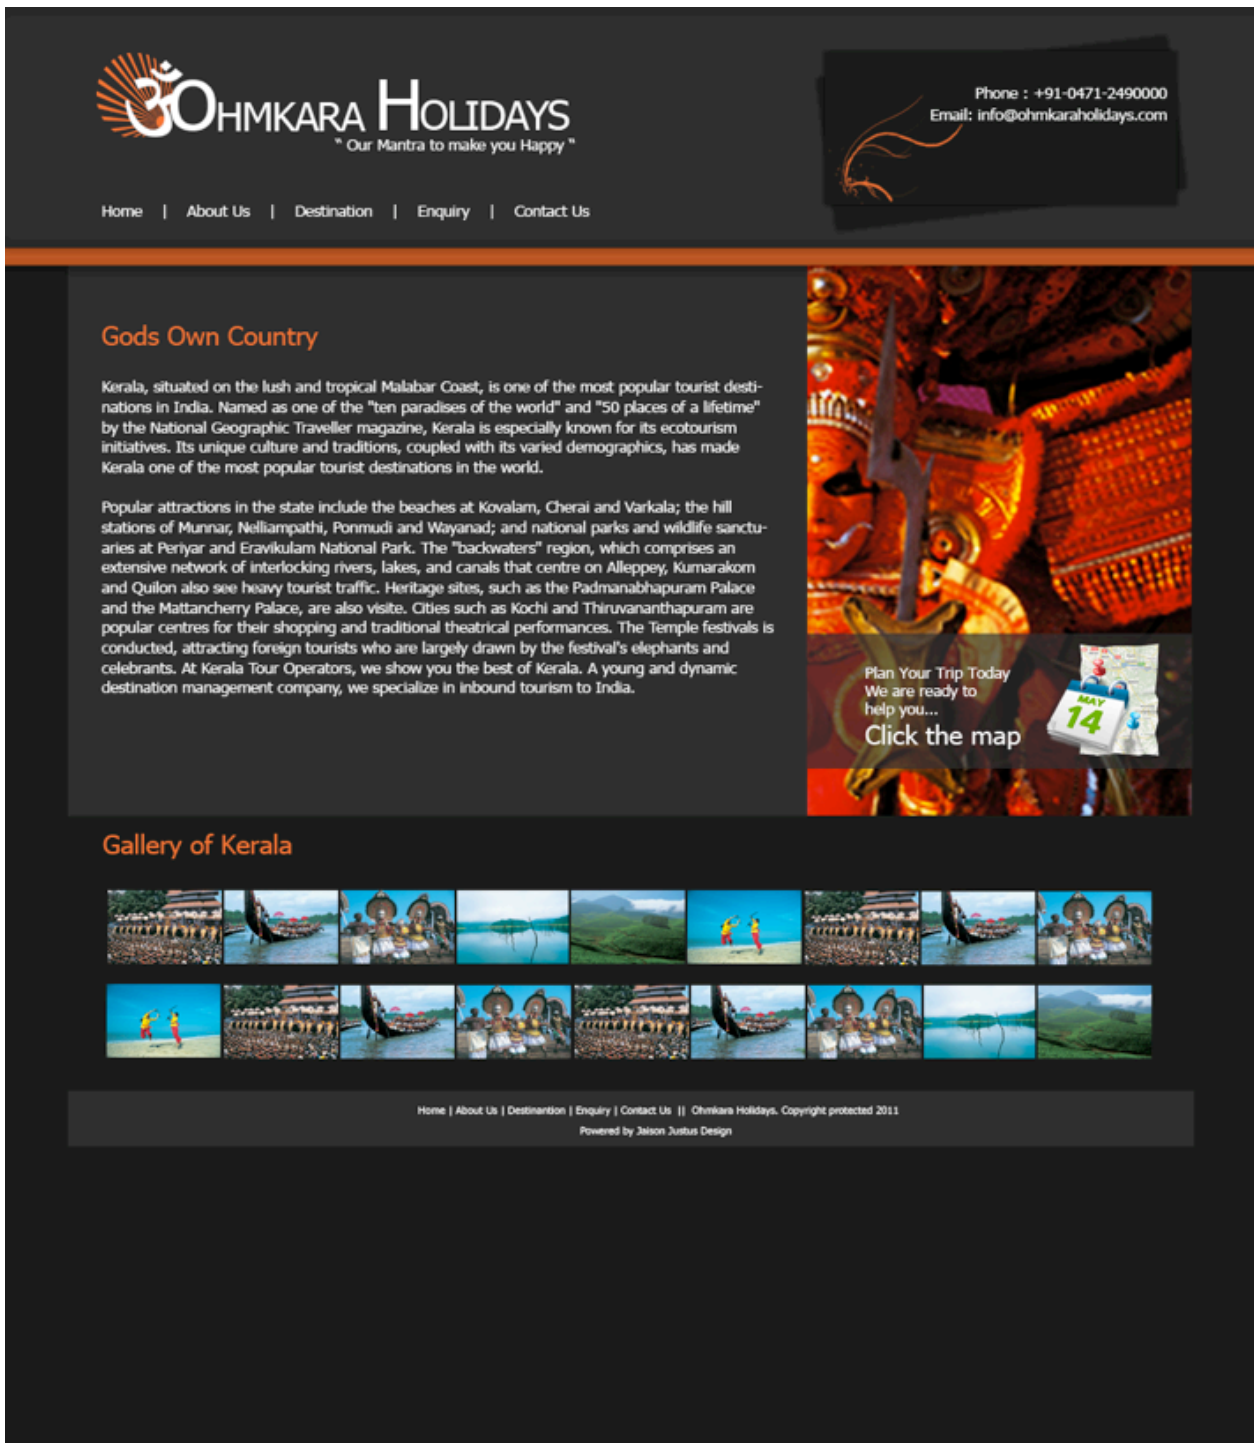

2. Web Space / We Server Requirements :

Minimum Web Space Required	:	50MB minimum requirement - can increase as required
Server Scripts Support	:	PHP Support required - for form processing
Database Requirement	:	MySQL v.5 required - for data storage
Email Integration	:	Google Apps Integration
Web Site Traffic	:	1GB per month - can increase as required

The above requirement suites the scope of the website. In any case of up gradation, it can be done with in couple of minutes. No problem in up gradation of this web server. For the time being the website traffic be 1GB per month and on the basis of heavy traffic to the website, its possible and easy to increase web traffic.

for more information about PHP and Mysql refer Annex (b)

Website Details

The above picture is the proposed website design. There are mainly 5 pages that the customer can see they are Home, About Us, Destination, Enquiry any Contact Us. The destination Page holds all the details about the places to visit with photographs. Enquiry page holds the form, which is to be filled by customer to book their trip and for enquiries. From this enquiry page all the details from the form are store into the database through a php file. In the front page their is a gallery for nice picture of kerala and it is implemented using JQuery for more aesthetic approach to the user simple and minimal.

for more information about PHP and JQuery refer Annex (b)

Mandatory Fields in the Form	
Name	Address
Country	Phone
Email	Destinations
Hotel Category	Train Class
Vehicle Type	Guest Count
Check-in date	Check-out date

Logo and Printing Works Details

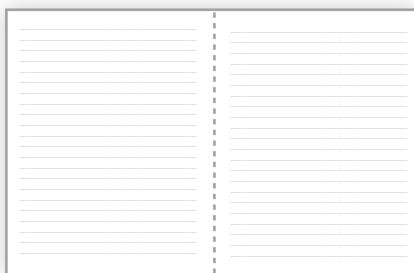

1. Logo Design:

The above picture shows the proposed logo for omkara holidays. From logo to website the color scheme for omkara holidays be orange (RGB code: #ee6432) and blackish gray (RGB code : #171817).

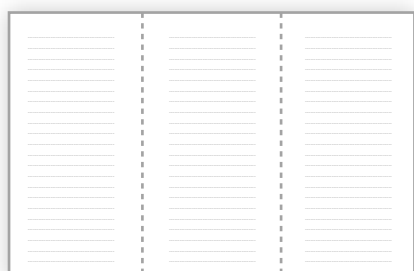

“ The reason why orange is selected because, In Hindu belief, orange represents the sacral chakra. as per sacral chakra Orange is a very high energy color. Also orange means : warmth, energy, enthusiasm, vibrancy, vitality, expansiveness, flamboyance, excitement, business goals, goal and more. So a mix of Orange and Ohm With Good Caption give aesthetic feeling to the website. The color combination is more attractive too. “

2. Brochure Design :

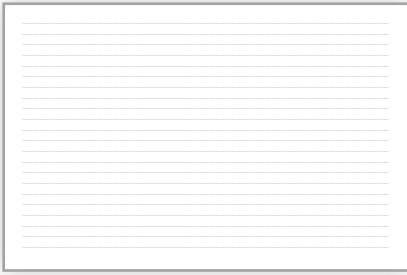

Brochure will be designed to carry out information and service descriptions about omkara holidays. The brochure get populated with beautiful pictures of Kerala. The brochure will contain 4 pages including front and back. International paper size of a page will be A4 and the Maximum size of an opened brochure will be A3.

3. Flyer Design:

Flyer will be designed to carry out brief information about omkara holidays. Flyer maximum size is A4 and the flyer is a three fold model. with the same color combination and design in website and brochure.

3. Business Design:

The business card will be a minimal designed one with omkara logo in one side and details in the other side. The Color combination will be the same as the website, Brochure etc.

250MB	2.5GB	1400
for higher option go for unlimited hosting where unlimited web space, unlimited data traffic, unlimited database storage and more		

Brief Description about Php, JQuery and Mysql

1. PHP

PHP: Hypertext Preprocessor is a widely used, general-purpose scripting language that was originally designed for web development to produce dynamic web pages. For this purpose, PHP code is embedded into the HTML source document and interpreted by a web server with a PHP processor module, which generates the web page document.

PHP is a general-purpose scripting language that is especially suited to server-side web development where PHP generally runs on a web server. Any PHP code in a requested file is executed by the PHP runtime, usually to create dynamic web page content. It can also be used for command-line scripting and client-side GUI applications. PHP can be deployed on most web servers, many operating systems and platforms, and can be used with many relational database management systems (RDBMS). It is available free of charge, and the PHP Group provides the complete source code for users to build, customize and extend for their own use.

2. jQuery

jQuery is a library that makes it quicker and easier to build JavaScript webpages and web apps. Often with jQuery you can write a single line of code to achieve what would have taken 10-20 lines of regular JavaScript code. It has advantages over using Flash contents on website they are no plugins needed, simple, reduced loading time, improved performance and more.

3. MySQL

MySQL is a popular choice of database for use in web applications, and is a central component of the widely used LAMP web application software stack—LAMP is an acronym for "Linux, Apache, MySQL, PHP". Its popularity is closely tied to the popularity of PHP.
